

# Welcome, Demo Student.

Personal opening packet · prepared by coach ReSpOnSe · season 68 · packet v1

**The program in one sentence:** you will be run like a pro-team player — my builds from my current-season ladder games, automated execution grading on every replay you submit, and a personal analytics record that shows exactly what improved and when.

## How this works

1. **You get my real builds.** Each matchup section below is generated from my own ladder database (591 parsed games this cycle) — the exact game it came from is cited, and the benchmark timings are my medians, not copied guides.
2. **You play them on ladder** and drop your replays in your submission channel. Every replay is machine-graded against my benchmarks the same day: a letter grade, a milestone-by-milestone delta table, and focus points. I personally review and annotate your lowest and strongest replay each week.
3. **We meet weekly.** Sessions start from your data — the recurring deviation, the trend, one drill. No generic lectures.
4. **The packet is alive.** When the season rolls or the meta moves, this document regenerates and you get a changelog. Your build library stays current for as long as you train with me.

## Your profile & goals

**Current MMR:** PvT 4380 · PvZ 4310 · PvP 4450

**Focus matchups:** PvT, PvZ

**Assigned builds:** PvT - Phoenix into Robo, PvP - Strange's 1 Gate Expand, PvZ - DT into 3 Stargate Void Ray

- Stabilize PvT opening: Stargate and Robo within grace window in 8 of 10 games
- Break 4500 in PvT by executing one build to automaticity
- Stop probe cuts during Phoenix harass windows

## How grading works

## The report card

Each milestone in your assigned build has a target (my median). Hit it within **12 seconds** for full credit; credit decays to zero at 90 seconds off. Buildings weigh double, upgrades 1.5x, units 1x. The weighted average is your **Build Adherence Score**.

| Score | Grade | Meaning                                                |
|-------|-------|--------------------------------------------------------|
| 93+   | A     | Pro-level execution — we work on decisions             |
| 80–92 | B     | Solid — one or two leaks to close                      |
| 60–79 | C–D   | The build isn't automatic yet — drill weeks            |
| <60   | F     | Wrong build or major derailment — we watch it together |

## Submitting replays

1. Play your **assigned** build for the matchup — grading is against that assignment.
2. Drop the .SC2Replay in your private channel (or submission folder).
3. Same day you get the report card. Cheese games under 4 minutes don't count against your trend.
4. Aim for **10+ graded games per matchup per week**. Consistency beats volume.

Scores are graded on trend, not absolutes — early weeks are your baseline, not a judgment.

## Practice protocol

- **Warm-up (10 min):** one no-opponent build execution vs Elite AI or in-unit-tester — full build to 8:00, benchmarks open on second screen.
- **Ladder block:** 3–5 games max per sitting, same build every game regardless of result.
- **One-mistake review (2 min/game):** open the report card, find the single worst milestone, say out loud why it slipped, queue again.
- **Stop rule:** two tilted losses in a row = end the block. Tilted reps train the wrong thing.

PvT - Phoenix into Robo

PvT

61.5% win rate · 117 games

season 68

pre-season example — newest on record

Reference game: White Rabbit LE vs PovertyTech (Terran) — 2026-05-25, Win. Every timing below is from coach ReSpOnSe's real ladder games; the benchmark column is the **median across all 117 games** of this build.

| Supply-by-supply opening |       |                  |          |
|--------------------------|-------|------------------|----------|

## Intake questionnaire (bring to session 1)

---

1. Current / peak MMR per matchup this season:

---

2. Three recent losses that *hurt* — map, matchup, what you think went wrong:

---

---

3. What do you blame most for lost games? (macro / builds / scouting / engagements / mental):

---

4. Practice hours per week you can actually commit:

---

5. Setup: camera hotkeys? rapid-fire? control-group layout? warp-in habit?

---

---

6. Send 5 recent replays (any result) **before** our first call — your baseline report cards will be ready when we start.

## Logistics

---

- **Sessions:** weekly 60 min, booked via your scheduling link; 24-hour reschedule policy.
- **SC2 Tools access:** your account includes the full app — opponent dossiers, auto build classification of your own games, and the OBS overlay. Activation steps arrive with your Discord invite.
- **Between sessions:** unlimited replay submissions on assigned builds; questions in your private channel answered within 24h on weekdays.
- **Roster:** this program takes a maximum of six students at a time.
